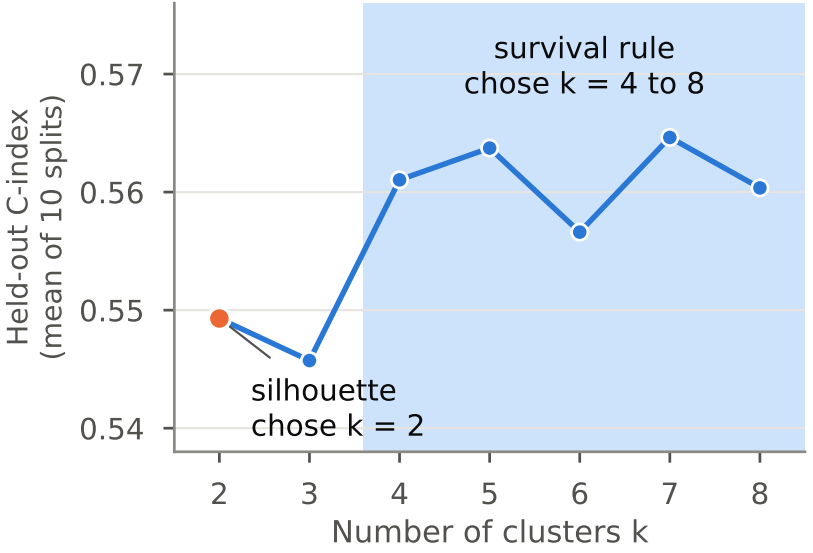
A pipeline for multi-omic subtyping

mRNA, copy number and mutations → Pathway, arm and mutation features → MOFA latent factors → k chosen by survival, then k-means

Evaluation

METABRIC (n = 1860) · held-out C-index · 10 repeated splits
simulation · stability · treatment effects · TCGA-BRCA

Choosing k by survival helps


Held-out C-index 0.565 vs 0.549 for silhouette, better in 9 of 10 repeated splits
